Troubleshooting .................................................................................................. 5
1. Before You Start

System Requirements

- 32-bit PCI 2.2 slot
- CD-ROM Drive
- CPU: 300MHz or above / 800MHz or above (Windows Vista)
- Memory: 256MB RAM or above / 512MB RAM or above (Windows Vista)
- 62.5/125μm multi-mode fiber cable
- Recommend Fiber Converter: TFC-110MSC or TFC-210MSC
- Recommend Switch: TEG-424WS

Application

100Base Multi-Mode SC Fiber-to-PCI Adapter (TE100-PCIFC)

24-Port 10/100Mbps Web Smart Switch with 4 Gigabit Ports and 2 Mini-GBIC Slots (TEG-424WS)

100Base-TX to 100Base-FX Multi Mode SC Fiber Converter (TFC-110MSC)

Internet
Cable/DSL Modem
2. How to Install

Note:
1. For Windows 98SE and ME driver installation, refer to the User's Guide on the Driver CD-ROM.
2. Do not install the TE100-PCIFC into your computer until you are instructed to do so.

1. Insert the **Driver CD-ROM** into your computer’s CD-ROM Drive.

2. Click **Run autorun.exe** (Windows Vista only).

3. Click **Install Driver**, and then click your operating system.
4. Click OK.

5. **Shutdown** your computer and then open your computer's case.

6. Insert the PCI card firmly into an available PCI slot, and then turn **ON** the computer and wait until the Windows desktop appears.

7. Drivers will install automatically.
Connect the TE100-PCIFC to your network

1. Connect a SC-type multimode cable from the TE100-PCIFC to a 10/100Mbps fiber converter (e.g. TFC-110MSC).

   Note: Make sure the TX and RX cables are reversed on the opposing connection.

2. Connect an Ethernet cable from the Fiber converter to an Ethernet port on your switch (e.g. TEG-424WS).

Your installation is now complete.

For detailed information regarding the TE100-PCIFC configuration and advanced settings, please refer to User Guide on the Driver CD-ROM.

Troubleshooting

Q1: I inserted the Driver CD-ROM into my computer's CD-ROM drive and the installation menu does not appear automatically. What should I do?
   A1: For Windows 2000/XP/2003 Server, if the installation menu does not appear automatically, click Start, click Run, and type D:\autorun where "D" in "D:\autorun.exe" is the letter assigned to your CD-ROM Drive, and then press the ENTER key on your keyboard. For Windows Vista, if the installation menu does not appear automatically, click Start, click the Start Search box, and type D:\autorun.exe where "D" in "D:\autorun.exe" is the letter assigned to your CD-ROM Drive, and then press the ENTER key on your keyboard.

Q2: Windows doesn't recognize my new hardware. What should I do?
   A2: First, verify that your computer meets the system requirements as specified in Section 1. Second, access your device manager to make sure the adapter is installed properly. If you see a networking device with a yellow question mark or exclamation point, you will need to reinstall the device and/or the drivers. To access the device manager on Windows 2000/XP, right-click My Computer, click Properties, click the Hardware tab, and then click Device Manager. To access the device manager on Windows Vista, right-click Computer, click Properties and then click Device Manager. Third, if the device manager fails to recognize the presence of a new networking adapter, verify that the network adapter is firmly seated in the PCI slot. Fourth, plug the adapter into another PCI slot on your computer.

Q3: Windows recognizes my new hardware, but I'm unable to connect to my network. What should I do?
   A3: First, verify that the cable is securely connected from your switch or router to your network adapter. Second, verify that the LEDs on your network card are lit. Third, verify that the TCP/IP settings are set to Obtain an IP address automatically (see the steps below).

Windows Vista

1. Go into the Control Panel, click Network and Internet, click Network and Sharing Center, click Manage Network connections and then right-click the Local Area Connection icon and then click Properties.

2. Click Internet Protocol Version 4(TCP/IPv4) and then click Properties. Then click on Obtain an IP address automatically.
**Windows XP/2000**

1. Go into the Control Panel, double-click the Network Connections icon and then right-click the Local Area Connection icon and then click Properties.

2. Click Internet Protocol (TCP/IP) and then click Properties. Then click on Obtain an IP address automatically.

**Q4:** I am not getting a network connection when I connect the TE100-PCIFC to my network. What should I do?

**A4:** First, check the fiber cable. Make sure you are using 62.5/125µm multi-mode fiber cable. Second, make sure the TX and RX cables are reversed on the opposing connection.

**Q5:** What is the maximum distance that is supported by the adapter?

**A5:** 2 kilometers.

If you still encounter problems or have any questions regarding the TE100-PCIFC, please refer to the User’s Guide included on the Driver CD-ROM or contact TRENDnet’s Technical Support Department.
Certifications
This equipment has been tested and found to comply with FCC and CE Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference.
(2) This device must accept any interference received. Including interference that may cause undesired operation.

NOTE: THE MANUFACTURER IS NOT RESPONSIBLE FOR ANY RADIO OR TV INTERFERENCE CAUSED BY UNAUTHORIZED MODIFICATIONS TO THIS EQUIPMENT. SUCH MODIFICATIONS COULD VOID THE USER’S AUTHORITY TO OPERATE THE EQUIPMENT.

ADVERTENCIA
En todos nuestros equipos se mencionan claramente las características del adaptador de alimentación necesario para su funcionamiento. El uso de un adaptador distinto al mencionado puede producir daños físicos y/o daños al equipo conectado. El adaptador de alimentación debe operar con voltaje y frecuencia de la energía electrica domiciliaria existente en el país o zona de instalación.
